

Holders for Spring Plunger HTR-FST

Holders for Spring Plunger HTR-FST

Design

- Spring-plunger holder made of high-strength, anodized aluminum, consisting of a holder, optionally with clamping screw, and various adapters.

Suitability for industry specific applications

Applications

- Used in combination with spring plungers, primarily in applications where it is necessary to compensate for workpieces with varying heights.
- Typical applications are the removal of metal sheets from a stack or the handling of curved car bodywork components in automobile factories.

Product highlights

- Stepless adaptation of the spring plungers FSTI allows fast, reliable adaptation to workpiece geometry
- Adaptation to all common load traverse systems; quick assembly, change and reusability of assemblies
- Minimal, lightweight design reduces costs
