

Vacuum Training Set

Vacuum Training Set

Design

- Portable set of suitcases
- Vacuum components for performing the practical exercises
- Extensive task book with sample solutions for all exercises
- CD-ROM containing all exercises and solutions in PDF format as well as further application examples from practice

Suitability for Industry Specific Applications

Applications

- Portable set of suitcase with various vacuum components for building sample applications for training purposes
- With the help of a task book, learners are introduced to vacuum technology step by step and can work on learning units independently
- For universities, vocational schools, educational institutions, learning centres, training workshops

Product Highlights

- Accompanying material for training courses on the subject of vacuum technology in automation
- Enables practical learning from basic construction of a vacuum system to complex system solutions, combined with an optimization of the component selection
