

Vacuum Operation Center VOC

Suction capacities of 40, 63 and 100 m³/h

Vacuum Operation Center VOC

System design Vacuum Operation Center VOC

Vacuum Operation Center VOC for vacuum generation in wet working conditions

Suitability for industry specific applications

Application

- Vacuum Operation Center VOC as a complete system ready to connect
- Specifically for evacuation of gaseous media containing liquids
- Liquid sucked in, such as cooling lubricants are separated and automatically returned to the machining cycle
- Audible, visual and electronic system monitoring for maximum security and control in standard machine operation
- Designed to be integrated in the machine control of the CNC machining center
- Three-shift and continuous operation possible, without interruption of processing

Design

- Signal lamps and audible alarm sounds (1) and vacuum gauge (2) for vacuum level in reservoir
- Vacuum and liquid reservoir (3)
- Interface for automatic liquid recirculation (4)
- Water separator (5) for separation of remaining liquid
- Vacuum switch (6) with digital or analog output for the control; control panel (7) of self-sufficient execution
- Base frame (8) with rear-mounted vacuum pump (9)

Product highlights

- Uninterrupted processing even with large parts, as liquids are automatically returned to the machine circuit
- Vacuum and level monitoring guarantees maximum process control and transparency
- Monitoring and operation via the machine panel possible, as sensor/control signals can be integrated
